

Iris

An AI market analyst for small online retailers

Iris watches the market, checks what matters to the store,
and brings the owner a useful next move in Telegram.

THE SME PROBLEM

The market changes while the owner runs the store

OUTSIDE THE STORE

Other stores change prices, offers and availability. New sellers can appear beyond the owner's watchlist.

INSIDE THE STORE

The owner knows the catalog, stock, costs and what the business can actually do.

A useful decision requires both views.

Iris connects market signals to business decisions

01 / RESEARCH

Look outward

Watches chosen competitor products and researches other sellers or offers when asked.

02 / INTERPRET

Check the store

Reads connected catalog, stock and cost facts to judge whether a finding matters.

03 / RESPOND

Bring a move

Explains one next move in Telegram and can prepare a grounded draft for the owner.

What changes for the owner

Less manual research

Scheduled watches let the owner review relevant changes instead of repeatedly checking product pages.

A wider market view

On-demand research can include stores and offers beyond the initial watchlist.

A clearer next move

Iris connects outside evidence to the store's stock and costs before recommending action.

Working agent. Merchant impact to measure.
